CASE STUDY · VIDEO EDIT PIPELINE

Edit the plan, not the *timeline.*

Raw clips go in. A fast preview and a Premiere-ready XML come out. Every editing decision lives in one file I can read and diff.

PLANO_DEMO.JSON — THE ONLY FILE I EDIT

```
"falas": [{"clipe": "fala",
  "in": 0.0, "out": 16.5}],
"cobertura": [{"clipe": "paisagem",
  "na_palavra": "pauses",
  "dur": 2.5}],
"textos": [{"estilo": "titulo",
  "texto": "PIPELINE\nDEMO"}]
```

A cutaway placed on a spoken word, not on a guessed second.

github.com/ramonaguiar-wq/video-edit-pipeline

One human gate between the plan and the XML.

YOU

Plan

A JSON file: clips, in and out points, cutaways, titles.

`plano.json`

02

Timeline

Cuts silences from word timestamps. Anchors items to words.

`montar.py`

03

Preview

A quick MP4 and a frame sheet, rendered in seconds.

`preview.py`

YOU

Approve

Look. If it is wrong, change the plan and run again.

`no XML yet`

05

Premiere

Final Cut XML and an SRT. Grading and polish happen here.

`xml_premiere.py`

WHY A PLAN

A file can be diffed, reviewed and rerun. A timeline cannot.

WHY PREVIEW FIRST

The preview takes seconds. The XML takes minutes.

16.5 seconds of padded speech became 9.7.

RAW CLIP

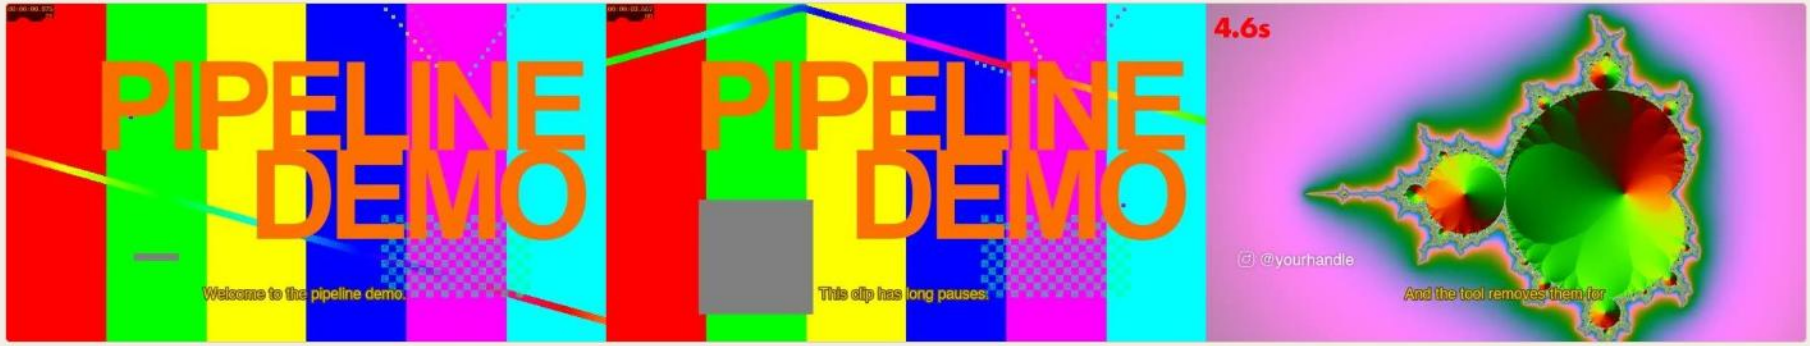

AFTER SILENCE TRIM · 5 CUTS · 6 CAPTIONS

Synthetic test footage: a generated voice with long pauses. It proves the mechanics, not a time saving on real episodes. **The XML validates with xmllint.**

Title, captions, and a cutaway on the word "pauses".

Left to right: the title with the first caption, the title with the second caption, then the cutaway and lower third. All generated from the plan on the first slide.

Small rules that keep the edit honest.

Anchor to words, not seconds	If the word is not in the transcript, the item is skipped with a warning. It never lands in the wrong place.
Preview before XML	Seconds to look, minutes to export. The slow step only runs after approval.
Hand off, do not replace	Premiere keeps the craft: grading, music, final polish.
Warn on unknown config	A typo in the plan prints a warning instead of being silently ignored.
